

CINGHIE A STOCK

A stock sono previste le cinghie Poly-V per i passi di rulli più frequenti.

Nella scelta occorre considerare:

- il diametro primitivo di avvolgimento della cinghia sta 1 mm sopra la puleggia, quindi $D_p = \varnothing \text{ puleggia} + 2 \text{ mm}$.
- Tensione media consigliata 5%; range di tensione ammessa 4-6%.
- Temperatura di lavoro: $-5 / + 80^\circ \text{ C}$

Per temperature più basse riferirsi a Rulmeca.

AVAILABLE BELTS

We have stock availability of the Poly-V belts for the most usual rollers pitches

In the choice it should be considered:

- The primitive wrapping diameter of the belt is located 1 mm over the head outer diameter, then $D_p = \text{head } \varnothing + 2 \text{ mm}$.
- Suggested average belt pretension 5%; pretension admitted range 4-6%.
- Working temperature: $-5 / + 80^\circ \text{ C}$

For lower temperatures please refer to Rulmeca.
